

ADVANCED AI AUTOMATION & AI AGENTS

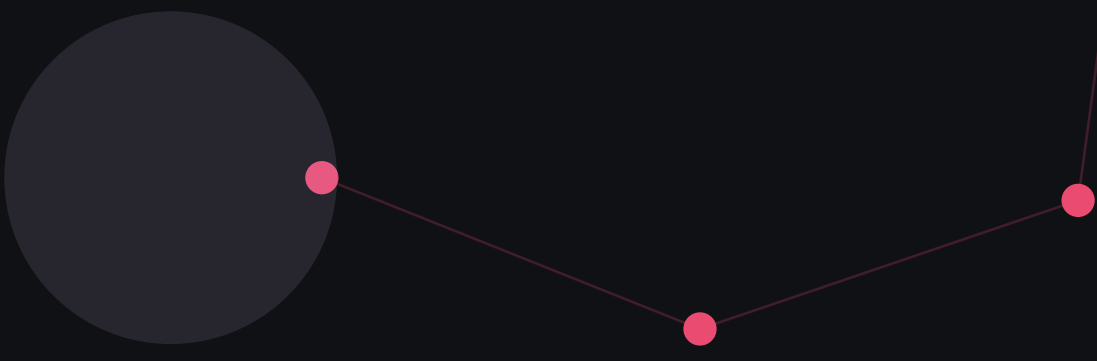

FLAGSHIP PROGRAM

From workflows to intelligent business systems.

A practical journey from automation fundamentals to AI agents, APIs, business workflows and client-ready automation systems.

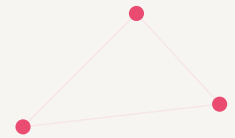

VEYORA ACADEMY

Education & Training Division of Veyora

Program Overview

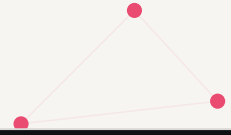

- Learn how modern businesses use automation and AI to reduce repetitive work.
- Build workflows that connect applications, data, APIs and AI models.
- Learn the difference between traditional automation, AI-powered workflows and AI agents.
- Progress from simple workflows to multi-step, intelligent business systems.
- Finish with a complete AI automation capstone suitable for a portfolio or client demonstration.

Learning Journey

01	Automation Foundations Triggers, actions, workflows, APIs, webhooks and JSON.
02	n8n & Workflow Building Nodes, expressions, conditions, integrations and error handling.
03	AI + Automation LLMs, prompts, structured outputs, classification and AI processing.
04	AI Agents Agents, tools, memory, multi-step tasks and human approval.
05	Business Automation Hotel, sales, customer support and social media systems.
06	Advanced Automation RAG, databases, APIs, reliability, security and deployment.

Core Curriculum

PHASE 01 • WEEKS 1–4

Automation Foundations

- What automation is and why businesses automate.
- Manual vs automated workflows.
- Triggers, actions, conditions and workflow logic.
- APIs, webhooks, HTTP requests and JSON.
- Authentication, credentials and basic debugging.
- Build your first end-to-end automation.

Practical Project: Form → Data → Automation → Notification

PHASE 02 • WEEKS 5–8

n8n & Workflow Building

- n8n interface, workflows, nodes and connections.
- Trigger and action nodes.
- Expressions and dynamic data.
- IF, Switch, loops and data handling.
- Google Sheets, Gmail, Forms and HTTP Request.
- Webhooks and error handling.

Practical Project: Automated Lead Management System

PHASE 03 • WEEKS 9–12

AI + Automation

- AI inside business workflows.
- LLM APIs and prompt design.
- Structured AI output.
- AI content generation.
- AI classification and summarization.
- Data extraction and lead qualification.
- Human approval steps.

Practical Project: AI Lead Qualification System

PHASE 04 • WEEKS 13–16

AI Agents

- What an AI agent is.
- Automation vs AI workflow vs AI agent.
- Agent architecture.
- Tools and function/tool calling.
- Memory and multi-step tasks.
- Agent instructions and decision-making.
- Tool permissions and human-in-the-loop.
- Agent testing and reliability.

Practical Project: Business AI Agent

PHASE 05 • WEEKS 17–20

Business Automation

- Hotel automation and customer inquiries.
- Lead collection, qualification and follow-up.
- WhatsApp/business workflow concepts.
- CRM and Google Sheets automation.
- AI social media content workflows.
- Customer support automation.
- Sales automation.

Practical Project: Choose one real business workflow and turn it into an automated system.

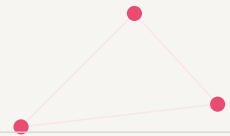

PHASE 06 • WEEKS 21–24

Advanced AI Automation

- Multi-step workflows.
- Multiple AI models and integrations.
- Advanced APIs and webhooks.
- Database integrations.
- RAG + automation.
- AI agents + n8n.
- Error recovery and logging.
- Security, credentials and secrets.
- Rate limits, cost control and workflow testing.
- Production and deployment thinking.

Practical Project: Complete AI Automation System — from business problem to working solution.

Tools & Technologies

Automation	n8n • Make • Webhooks • APIs • HTTP Requests • JSON
AI	ChatGPT / OpenAI • Claude • Gemini • LLM APIs • AI Agents
Business	Google Sheets • Google Forms • Gmail • CRM integrations
Social & Content	Instagram • Facebook • TikTok • YouTube • AI content/video tools
Advanced	RAG • Databases • JavaScript basics • MCP concepts
Reliability	Error handling • Logging • Credentials • Testing • Monitoring

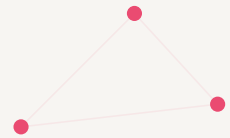

Real-World Projects

- Automated Lead Management System
- AI Lead Qualification System
- Business AI Agent
- Hotel Automation Workflow
- AI Social Media Automation
- AI Customer Support Workflow
- AI Sales Automation
- Final End-to-End AI Automation System

What You Will Be Able To Build

- Connect different apps and services into one workflow.
- Use APIs and webhooks to move information between systems.
- Add AI to repetitive business processes.
- Create AI agents that can use permitted tools.
- Build automated lead, sales and customer-support systems.
- Create AI-powered content workflows.
- Design and test multi-step business automations.
- Turn a business problem into a working automation solution.

Career & Freelancing Applications

- AI Automation Specialist
- AI Automation Engineer
- n8n Automation Specialist
- AI Agent Builder
- Workflow Automation Specialist
- Business Process Automation Specialist
- AI Solutions / Automation Freelancer
- AI Automation Consultant

Client-Ready Thinking

- Understand the client's problem before choosing a tool.
- Map the existing manual process before automating it.
- Choose the simplest reliable workflow that solves the problem.
- Protect credentials, private information and API keys.
- Add error handling and human approval where appropriate.
- Test the workflow with normal and failure cases.
- Document the final system so another person can understand it.

Final Capstone

Business Problem → Workflow Design → AI Integration → Tools/APIs → Automation → Testing → Deployment → Documentation

Students will create one complete automation system around a practical business use case and present how the system works, what problem it solves, what tools it uses, and how it handles errors and approvals.

Certificate

Students who successfully complete the required learning, practical work and assessment criteria can receive a Veyora Academy Certificate.

Veyora — Registered Technology & Digital Solutions Business
Veyora Academy — Official Education & Training Division of Veyora
Tax Registration: NTN / FBR Registered Business
