

VEYORA

CYBER SECURITY

Veyora Academy • Education & Training Division

Ethical Hacking • Digital Defence • Red Team • Blue Team

6-MONTH PROFESSIONAL PROGRAM

Learn how systems are attacked.
Learn how attacks are detected.
Learn how systems are defended.

LEVEL Beginner → Intermediate	FORMAT Theory + Practical Labs
DURATION 6 Months / 24 Weeks	OUTCOME Projects + Veyora Certificate

Veyora is a registered business with NTN. Veyora Academy is the education and training division of Veyora, while Veyora also provides digital and technology services.

Build security skills responsibly — through authorized labs, simulated environments and real-world security concepts.

ABOUT VEYORA

Veyora is the parent technology & digital solutions brand. Veyora works across digital services, technology solutions, automation and other business-focused capabilities.

Veyora Academy is Veyora's education & training division. The Academy is designed to teach practical, career-focused digital skills through structured programs, hands-on learning and project-based training.

VEYORA

Technology & Digital Solutions

A registered business providing digital and technology services to clients and organizations.

VEYORA ACADEMY

Education & Training

Veyora's learning division, delivering structured professional courses and practical skill development.

CERTIFICATION

Professional Learning

Students who complete the required program and assessment receive a Veyora Academy certificate, subject to the Academy's completion criteria.

One brand. Two connected sides.

Veyora builds and delivers digital solutions.

Veyora Academy builds the people and skills behind the digital future.

This program is part of the Veyora Academy portfolio and follows the same practical, professional approach used across the Veyora ecosystem.

WHY CYBER SECURITY?

Businesses now depend on websites, cloud platforms, online payments, customer databases, applications and connected devices. Every digital system creates a security surface that needs to be understood and protected.

WHAT YOU WILL BUILD

DIGITAL DEFENCE Protect systems, accounts, networks and data through security controls and hardening.	ETHICAL HACKING Understand how vulnerabilities are discovered and tested in authorized environments.
SECURITY ASSESSMENT Identify weaknesses, understand risk and communicate practical remediation.	WEB & API SECURITY Understand common security risks in websites, applications and APIs.
THREAT DETECTION Read security events, recognize suspicious activity and investigate incidents.	RED + BLUE TEAM Develop attacker and defender perspectives, then combine them through Purple Team exercises.

THE VEYORA APPROACH

You Learn → You Practice → You Investigate → You Defend → You Fix → You Retest

Students work through practical exercises, security scenarios, reporting tasks and a final project in controlled, authorized environments.

YOUR 6-MONTH LEARNING JOURNEY

01	CYBER SECURITY FOUNDATIONS Networking • Linux • Windows • Security Fundamentals
02	RECONNAISSANCE & SECURITY ASSESSMENT OSINT • Asset Discovery • Vulnerability Assessment
03	WEB & API SECURITY Web Applications • Authentication • Access Control • API Security
04	ETHICAL HACKING & RED TEAM Security Testing • Penetration Testing Methodology • Controlled Labs
05	BLUE TEAM & DEFENCE Monitoring • Threat Detection • SOC Concepts • Incident Response
06	ADVANCED SECURITY & PURPLE TEAM Cloud Security • Attack & Defence Simulation • Final Security Project

Detailed class-by-class curriculum, lab instructions and assessment framework are provided during the program.

TOOLS & TECHNOLOGIES YOU'LL EXPLORE

Students will learn what these tools are used for, how to interpret their output and where they fit into a professional security workflow.

SECURITY & TESTING

Kali Linux • Nmap • Burp Suite • OWASP ZAP • Wireshark • Metasploit • Gobuster

OPERATING SYSTEMS

Linux • Windows • System permissions • Services • Logs • Security controls

WEB & API SECURITY

Browser Developer Tools • HTTP/HTTPS • API concepts • Authentication • Access control

DEFENSIVE SECURITY

Log analysis • Monitoring • SIEM concepts • Endpoint security • Threat detection

CLOUD & IDENTITY

Cloud security fundamentals • IAM • MFA • Permissions • Secrets • Misconfiguration

Tools are part of the learning process—not the goal. The focus is understanding security concepts, evidence and responsible application.

ATTACK + DEFENCE

Cyber Security becomes much stronger when you understand both sides of the problem.

RED TEAM

Understand how weaknesses can be identified in authorized environments.

SECURITY TESTING

Assess vulnerabilities and collect evidence safely.

BLUE TEAM

Detect suspicious activity and investigate security events.

DEFENCE

Strengthen systems, controls and configurations.

PURPLE TEAM

Combine attack knowledge and defensive detection to improve security.

THE CORE CYCLE

Attack in a controlled lab → Detect → Investigate → Defend → Fix → Retest

All practical security testing is conducted in authorized training environments, simulations or systems where explicit permission has been provided.

PRACTICAL PROJECTS

01	Website Security Assessment Assess a controlled training application, document findings and propose remediation.
02	Network Security Assessment Analyze an authorized lab network and produce a professional security report.
03	Security Incident Investigation Work through a simulated incident using logs, evidence and an investigation workflow.
04	Red Team vs Blue Team Simulation Connect offensive testing with defensive monitoring and response.
05	FINAL PROJECT Complete an end-to-end security assessment and defence project in a controlled environment.

CAREER PATHWAYS

Potential directions after building further experience:

Cyber Security Analyst • Entry-Level SOC Analyst • Security Support • Junior Security Testing • Vulnerability Assessment • IT Security • Incident Response Foundation

The program builds a foundation; professional roles typically require continued practice, specialization and, where relevant, certifications or employer-specific requirements.

WHO IS THIS PROGRAM FOR?

Beginners entering Cyber Security • Students interested in ethical hacking • Freelancers adding a technical skill • IT professionals expanding into security • Website/business owners who want stronger security awareness

WHAT YOU NEED

Required: Laptop • Stable internet • Basic computer knowledge • Willingness to practice
Helpful, not mandatory: Basic English • Basic programming • Basic networking

CERTIFICATE & PROFESSIONAL IDENTITY

Students who successfully complete the required learning, practical work and assessment criteria can receive a Veyora Academy Certificate. The Academy operates as Veyora's education and training division, connecting learning with the wider Veyora technology ecosystem.

RESPONSIBLE CYBER SECURITY

Cyber Security is a responsibility, not a weapon. Veyora students learn through authorized labs, simulated environments and permitted systems. Unauthorized access, testing or disruption of real systems is not part of the program.

YOUR DIGITAL FUTURE STARTS HERE.

Learn the attack. Understand the defence. Build the skill.
